SigScan 2.0

Order, Scan, Upload, and Complete Your Order – Simple and Seamless!

Signature CUSTOM ORTHOTICS

1

Order Placement

Practitioners initiate the scanning process by completing the patient information section on the digital order form directly on the app (paperless). Once this information is in, one may begin scanning.

2

Seamless Transition

Once the order form is filled in, the system seamlessly launches the **SnugFit Order-N-Scan App** on your device.

3

Digital Scanning

The app, built on facial recognition technology, guides the user through a simple, intuitive 3D scanning process. Whether scanning the foot for orthotics or custom brace-wear, this advanced technology ensures accuracy and precision down to 1mm.

4

Upload Order Information

When the scan is done, upload your scan data and order information directly to Signature Custom Orthotic Lab in one step. Signature Custom Orthotic Lab receives everything needed to craft your orthotic or AFO product. The order remains on hold until one sends the files, ensuring that insurance and other needs are buttoned up before the product is ordered. Eliminating the need to fax the order form, the app retains the form document as a PDF for future reference.

Use it your way

Available as a native app or a web browser based app.
iPhone and Android compatible; no other hardware needed. The app is free to participating Signature Custom Orthotic Lab clients (minimum volume requirements apply).
